# WaterSENSE Concept – WaterSENSE Toolbox

1. **Water Monitoring System:** Modular, operational, Integrates Copernicus EO data, ground radar, models, in-situ data;
2. **Water Management Toolbox:** makes data and services available to users.
  - Various Apps provides reliable, actionable Information

# WaterSENSE Supply Chain Model

# Example Application

## Water Use and Compliance Monitoring

- Demonstration Partner DPIE and NRAR
  - Namoi Catchment
- Satellite based compliance check
- Compares the actual crop evaporation (due to irrigation) with the allowed water
- Easy identification of big water users
- Per field or larger unit

FAO Standard

| Energy Balance Modelling

| Automated

# How do we calculate Irrigated Water Use?

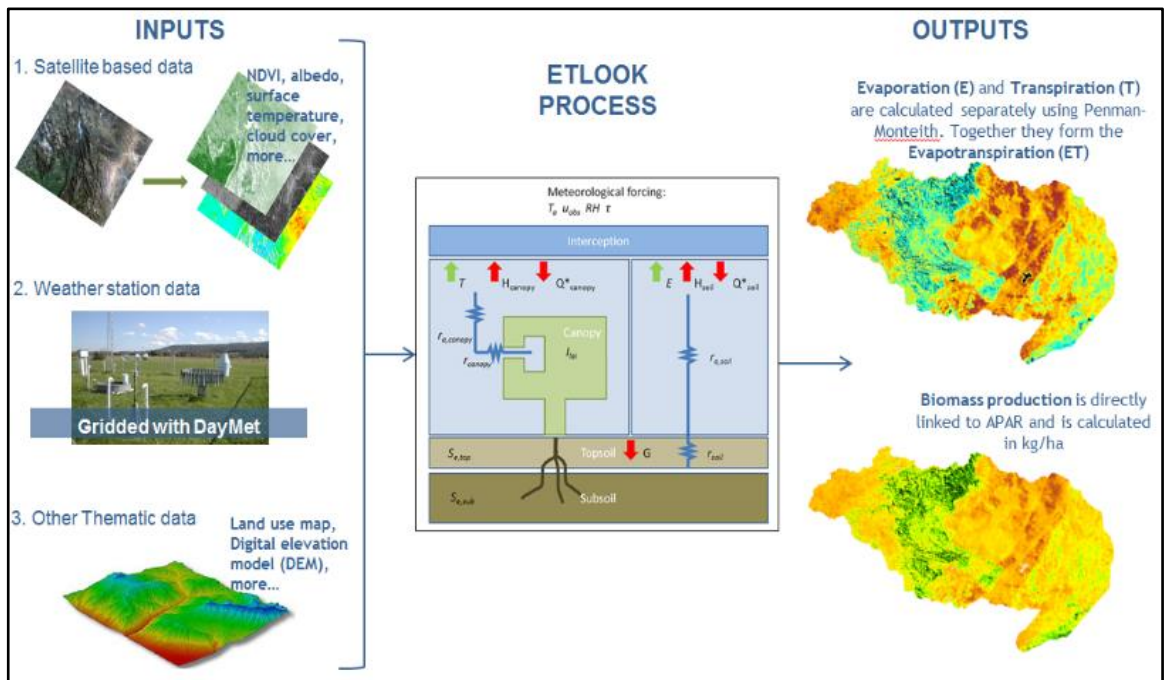

# Toolbox – ETLook Energy Balance Modelling

## ETLook and PiMapping®

Pelgrum H, Miltenburg IJ, Cheema MJM, Klasse A & Bastiaanssen WGM 2011. ETLook: A novel continental evapotranspiration algorithm. Remote Sensing and Hydrology, Jackson Hole, Wyoming, USA.

- Based on satellite imagery and meteo data
- Calculating physical processes (e.g. Energy Balance Modelling – Evolution of original SEBAL algorithm)
- Resulting in quantitative data in mm, kg, °C, ...
  - Scalable
  - Calibrated per area, not image
  - Automated processing facility. Many images processed automatically every day

# ET Look Data Outputs

## Data Components

### WATER

Actual Evapotranspiration (E, T, I), precipitation, topsoil moisture, water stress, water productivity, water accounting, irrigation performance

### VEGETATION

Actual biomass production, sowing date, harvest date, land cover, fPAR, crop coefficient, crop yield, Leaf Area Index LAI, Normalized Difference Vegetation Index, Fraction Vegetation Cover

### CLIMATE

Air temperature, air humidity, wind speed, cloud cover, solar radiation, surface temperature, sensible heat flux (H), latent heat flux (LE)

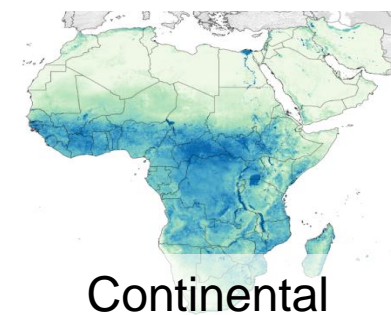

Field

Regional

National

Continental

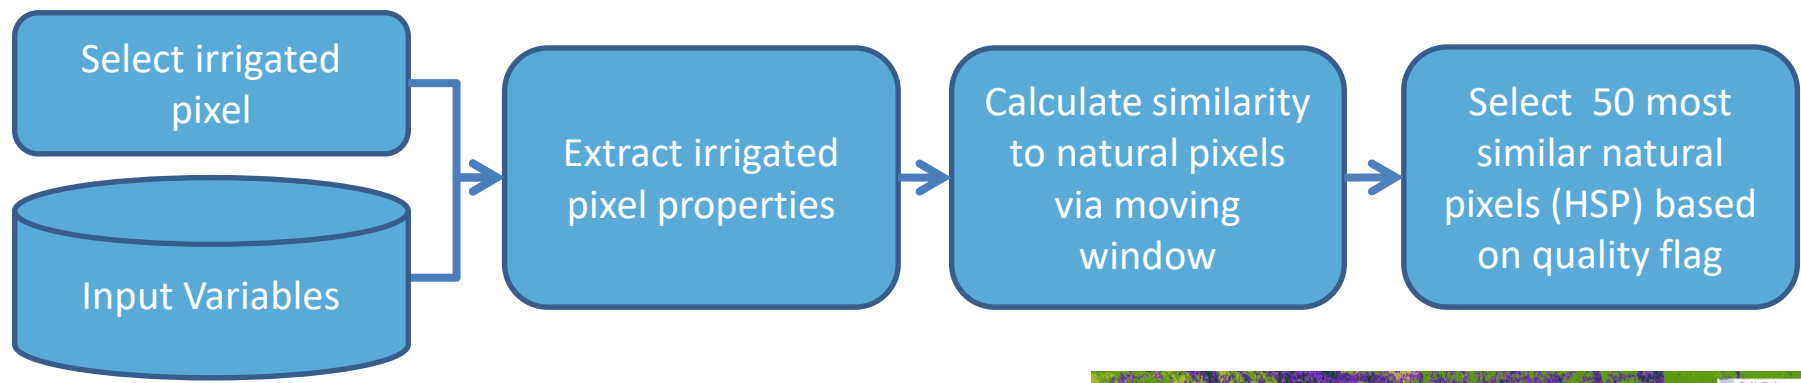

Quantified For every level of detail

# Toolbox – Hydrologically Similar Pixels

## Input variables (pending on data availability)

### Static (sub-divided in classes)

- Slope Gradient
- Slope Aspect
- Topographical Wetness Index
- Soil texture

### Periodical (operational similarity score)

- Reference ET
- Precipitation

land use map is used to exclude certain natural clas

- Water, Wetlands, Riparian Vegetation, Forest

# Easy access via Api or App with HydroNET

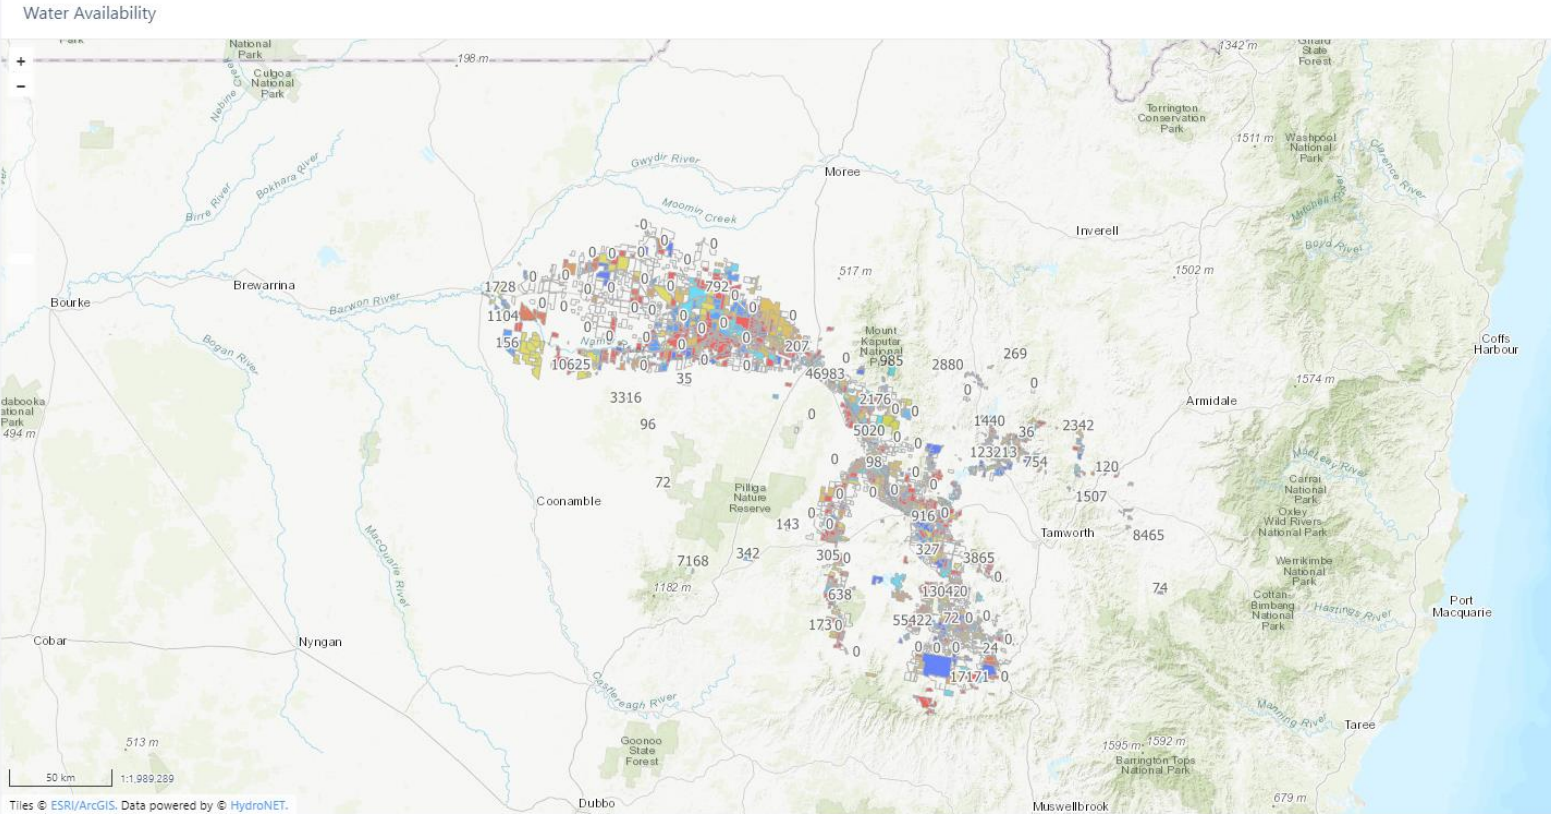

# Water Auditing App

- DASHBOARDS
- Water Auditing - Namoi
- Water Use
- Water Use Difference
- Water Availability Balance**
- WaterUse
- TOOLS
- Dashboard Manager
- Map Tool

## Water Availability Balance

01-08-2017 08:00 to 01-08-2018 08:00 Edit mode

FAO Standard | Independent | Energy Balance Modelling | Automated

# Water Auditing App

## Water Use Difference

01-08-2017 08:00 to 01-08-2018 08:00

Edit mode

Water Use Difference

< Map < List

Save chart as

Average sum of water use (DPIE) Accumulated megaliter

— Average groundwater use (DPIE) - 1387 — Average regulated water use (DPIE) - 1387 — Average sum of water use (DPIE) - 1387 — Average water use (eLEAF) - 1387
